Leon Zhang

Machine Learning Engineer

Phone (US): (206) 487-6780 | E-Mail: leon.zhang@duke.edu | Address: Durham, NC ; Vancouver, BC | Website | LinkedIn | GitHub

Summary of Qualifications

Programming Languages: Python, Java, SQL, R, MATLAB, C++, JavaScript, HTML, CSS

Software Tools / Skills: ML (Sklearn, PyTorch, TensorFlow, Keras, Hugging Face), Git, Docker, Cloud Computing (AWS, Azure, GCP), CI/CD, Flask, ETL (Spark, MapReduce, Snowflake, RapidMiner), Visualization (Tableau, Grafana)

Selected Coursework: Machine Learning, Deep Learning, Natural Language Processing, Statistical Modeling, Data Engineering, Database Management Systems, Data Structures, Algorithms, Data Visualization, A/B Testing

Certifications: AWS Certified Solution Architect – Associate [Credentials]

Education

Duke University, Durham, NC   Aug. 2020 – Apr. 2022

Master of Science, Data Science (MIDS)   Overall GPA: 3.78/4.00

• Duke Interdisciplinary Product Management Club: Co-Founder, [SQL Workshop Speaker]

University of Washington, Seattle, WA   Sep. 2016 – Jun. 2020

Bachelor of Science, Chemical Engineering   Overall GPA: 3.55/4.00   Computer Science GPA: 3.76/4.00

Professional Experiences

Data Science Intern, Windstream – Durham, NC (Remote)   May. 2021 – Aug. 2021

• Facilitated proactive live customer services through developing NLP transformer models for chatbot systems in PyTorch.

• Established REST API endpoints of deep learning models for cross-functional usage including chatbot and KPI dashboards.

• Accelerated customer digital adoption by 30% through communicating insights and building dashboards on user activities, remedy tickets, IVR routing, and customer satisfaction using SQL, Python, statistical modeling, and Grafana.

ML Software Programmer, Duke Health System – Durham, NC   Jan. 2021 – Present

• Assist doctors in finding targeted cancer treatment through implementing clustering algorithms using Python and R.

• Formulated a new algorithm that produces symptom-patient block clusters after communicating effectively with stakeholders on the research goal.

Research Assistant, University of Washington – Seattle, WA   Jan. 2019 – Jun. 2020

• Devised a variational autoencoder with the research team to explore chemical reaction pathways and predict intermediate chemical species using TensorFlow, NumPy, and Pandas.

• Implemented rotational techniques with quaternion coordinate system to visualize molecule interactions in Python and C++.

Projects & Competitions

Reinforcement Learning for Algorithmic Stock Trading [Link]   Sep. 2021

• Develop trading strategies from deep reinforcement learning algorithms using PyTorch and StableBaseline3.

• Designed a simulated trading environment that provides reinforcement learning algorithms with feedback using OpenAI Gym.

2020 Duke Datathon – 1st Place [Link]   Oct. 2020

• Collaborated in a team of four in presenting insights of COVID-19 economic impacts and proposing relieves using time-series and regression models in R and Python.

• Built a comprehensive metric using PCA that reflects the economic condition of a country over time to perform modeling.

Movie Recommendation Web Application [Link]   Aug. 2020

• Launched a full-stack web app on GCP to provide movie recommendations using Python, JavaScript, Flask, HTML, and CSS.

• Automated code testing, deployment, and scaling pipelines through CI/CD practices.
